

 **QUALITY**
made in Germany

Our mission for the past 100 years: To produce the best tools for metalworking

BIAX is a trademark of Schmid & Wezel, a Swabian family company founded in 1919. We have always developed and produced high-precision and high quality pneumatic and electric tools. All of our machines are manufactured in Germany and Switzerland and are tailored to the needs of the metalworking industry. Our wide range of hand-held air grinders offers the perfect solution for almost any deburring or grinding task. We offer a wide range of stationary pneumatic spindles with and without deflection for automated processing with robots or CNC machines. The BIAX range is rounded off by our other products such as pneumatic filers, saws, chisels, drills, electric scrapers, machines with flexible shafts and carbide tools.
